Public consultation on EU funds in the area of investment, research & innovation, SMEs and single market

Introduction

'A stronger Union needs to be equipped with appropriate financial means to continue to deliver its policies. The Union has changed fundamentally in recent years, as have the challenges it faces. Our Union needs a budget that can help us achieve our ambitions. The Multiannual Financial Framework for the period after 2020 must reflect this.' (Commission Work Programme 2018)

The EU budget currently amounts to less than 1 euro per citizen per day. Although a modest budget, at around 1 % of the EU's gross national income or 2 % of all EU public spending, it supports the EU's shared goals by delivering essential public goods and tangible results for EU citizens. These include: investing in skills, innovation and infrastructure; ensuring sustainable food systems and developing rural areas; ensuring a clean and healthy environment and the protection of natural resources; promoting joint research and industrial projects; funding shared activities in the field of migration and security; and supporting development and humanitarian aid.

The current Multiannual Financial Framework — the EU's long-term budget — runs until the end of 2020. In 2018, the Commission will put forth comprehensive proposals for the post-2020 Multiannual Financial Framework and for the next generation of financial programmes that will receive funding. These programmes/funds provide financial support to hundreds of thousands of beneficiaries such as regions, towns, NGOs, businesses, farmers, students, scientists, and many others.

The Commission's proposals will be designed to make it possible for the EU to deliver on the things that matter most, in areas where it can achieve more than Member States acting alone. This requires a careful assessment both of what has worked well in the past and what could be improved in the future. What should the priorities be for future policies and programmes/funds? And how can they be designed to best deliver results on the ground?

As an integral part of this process and following on from the [Reflection Paper on the Future of EU Finances](#), the Commission is launching a series of public consultations covering all the major spending areas to gather views from all interested parties on how to make the very most of every euro of the EU budget.

The EU has developed a variety of instruments to stimulate investment and entrepreneurship to create jobs and growth. The Investment Plan for Europe, the so-called Juncker Plan, aims to unlock investment throughout Europe through to the European Fund for Strategic Investments (EFSI), which provides a EU guarantee to mobilise investment. The EFSI also complements other existing instruments like COSME that make it easier for small and medium-sized enterprises (SMEs) to access finance in all phases of their lifecycle – creation, expansion, or business transfer. Through EU support, businesses have easier access to guarantees, loans and equity capital.

Research and innovation are instrumental for addressing the EU's productivity gap and play a crucial role in providing solutions to many global challenges the EU and its citizens are facing today. In that context, the EU has made a major contribution with the Horizon 2020 programme.

The European Single Market is one of the EU's greatest achievements. It has fuelled economic growth and made the everyday life of European businesses and consumers easier. A well-functioning Single Market, including in its digital dimension, stimulates competition and trade, improves efficiency, raises quality, and helps cut prices. In that context, the EU has set up several programmes in a wide range of areas (health, food safety, customs...) to facilitate the free circulation of goods, services, capital and persons across the European continent.

Recent consultations already covered several policy areas, including on current performance and future challenges. The views already expressed by stakeholders in these consultations will be taken into account as part of the current process for the future MFF.

* 33 To what extent do the current programmes/funds add value, compared to what Member States could achieve at national, regional and/or local levels?

- To a large extent
- To a fairly good extent
- To some extent only
- Not at all
- Don't know

34 Please specify how the current programmes/funds add value compared to what Member States could achieve at national, regional and/or local levels. Please clearly indicate to which policies, programmes and funds your answer refer.

1500 character(s) maximum

The Framework Programmes for R&I play a critical role in boosting cross-national, interdisciplinary and inter-sectorial R&I collaborations across Europe and there are no national initiatives with such a broad scope and focus. In particular, current and recent programmes have supported large-scale infrastructure and research projects, particularly through ESFRI and the FET actions, with broad financial support to partners in many countries. These programmes fund cross-border research and research infrastructures that, because they are supranational, would be difficult for national governments to support. Additionally, they promote mobility and help build personal networks across Europe: movement of people, and personal networks, have real, if difficult to measure, benefits to research and commercial activities throughout the EU. At smaller scales the funding from the European Research Council for research projects, and to the Marie Skłodowska-Curie Actions for individual researchers, through support for cross-border research and personal networks, also play a significant role in boosting excellent science in Europe.

35 Is there a need to modify or add to the objectives of the programmes/funds in this policy area? If yes, which changes would be necessary or desirable? Please clearly indicate to which policies, programmes and funds your answer refer.

1500 character(s) maximum

Desirable changes in the policy area of R&I would be to reintroduce support for basic research in the health domain due to the essential role of basic research as the key driver of innovation. The ability of Europe to

handle today's pressing issues, such as curing and eradicating illnesses, will require further breakthroughs that arise from basic research. EMBL would also support funding access by the smaller and newer EU member states to state-of-the-art Research Infrastructure that are primarily located in the EU15. Additionally, the next programme should provide stronger and more systematic support for the utilization and curation of existing biomedical data deposited in data repositories across Europe. Data repositories, such as those managed by EMBL-EBI and coordinated by ELIXIR, are crucially important in storing the data produced by research funding, and they add value by allowing re-use of research data. Curation—the interpretation of data—also adds tremendous value to data repositories, yet curatorial activities are perpetually underfunded: this leaves much potential value locked within uncurated raw data. The European Open Science Cloud is also a promising initiative. We suggest that the success of EOSC will depend on involvement of commercial providers, with EOSC concentrating on providing bespoke services to scientists that complements the technical strengths of the commercial providers.

36 The Commission has preliminarily identified a number of possible obstacles, which could prevent the current programmes/funds from achieving their objectives. To what extent do possible obstacles prevent the current programme/funds from achieving their objectives?

EMBL would welcome further efforts to harmonize the legal framework for accessing and sharing health data across borders in Europe.

38 The Commission has preliminarily identified a number of steps that could help to further simplify and reduce administrative burdens for beneficiaries under current programmes/funds. To what extent would these steps be helpful in your view?

For the R&I programmes, EMBL recommends extending the use of a two-stage application process in FP9 whenever it is appropriate. Two-stage applications save time for applicants who do not make it to the second stage: time they can use for research, or to attract other funding. An additional simplification would also be to acknowledge organisations' own accounting practices and to adapt a more trust-based approach to audit, highlighting accountability and performance rather than compliance and control. Many Horizon 2020 beneficiaries, members of the European Parliament, and indeed the European Court of Auditors, have encouraged adopting such an approach.

40 How could synergies among programmes/funds in this area be further strengthened to avoid possible overlaps/duplication? For example, would you consider grouping/merging some programmes? Please clearly indicate to which policies, programmes and funds your answer refer.
